

In late 2007, Greenstar acquired the then largest independent recycling and waste operation in the major northern cities of Leeds and Bradford, historic heart of the textile industry. The west Yorkshire facility mainly recovers and recycles pre and post consumer paper and cardboard products, but also handles around 20,000 tonnes of commingled plastics, steel and aluminium cans. The site provides waste collection and recycling services for the region's industrial and commercial sector.

Year built: 1974

Plant square feet: 3 1/2 acre site

Tonnes processed annually: 70,000 to 90,000

Types of material processed: Paper, cardboard, plastic, aluminium and steel

of Employees: 70
